YOUR NAME

(000) 000-0000 | you@example.com | linkedin.com/in/your-handle | github.com/your-handle

Education

University of Maryland College Park, MD
Bachelor of Science in Computer Science | GPA: 3.65/4.0 *Expected May 2028*

- **Relevant Coursework:** Computer Systems, Databases

Technical Skills

Languages: Java, Python, TypeScript, JavaScript, C, SQL
Frameworks: Spring Boot, FastAPI, React, Next.js, Prisma, SQLAlchemy
Data & Infrastructure: PostgreSQL, Redis, Redis Streams, Docker, AWS EC2, Amazon RDS, WebSockets
Tools & Concepts: Git, REST APIs, event-driven systems, distributed processing

Experience

Freelance Software Engineer May 2026 – Aug 2026
Online Proprietary Trading Group *Remote*

- Designed and deployed a real-time trading analytics platform with Java, Spring Boot, React, TypeScript, Redis, and WebSockets, replacing $100+/month in third-party tooling for each of 10+ users
- Built event-driven screening pipelines that evaluated 10,000+ market instruments daily across 15+ indicators while achieving <100 ms p95 end-to-end latency with Redis-backed state
- Delivered 8+ production features from requirements through deployment and debugging in direct collaboration with the client

Software Developer Jan 2026 – Jun 2026
Physical Therapy & Rehabilitation Clinic *Bowie, MD*

- Collaborated on a 5-person team to deploy an internal scheduling platform used by clinic staff to manage 50+ weekly appointments
- Owned backend development with Python, FastAPI, SQLAlchemy, and PostgreSQL, implementing APIs for appointments, therapist availability, patients, and treatment rooms
- Engineered transactional scheduling logic that prevented double-bookings across therapists, patients, and treatment rooms while preserving database consistency

Computer Science Mentor & Tutor Aug 2025 – May 2026
University of Maryland Honors College *College Park, MD*

- Mentored 30+ students for 10+ hours per week in data structures, algorithms, object-oriented programming, debugging, and software design
- Reviewed 50+ programming assignments and projects for correctness and code quality, providing actionable debugging and design feedback

Projects

Distributed Email Processing System | *Java, Python, Spring Boot, Redis Streams* Dec 2025 – Feb 2026

- Engineered a distributed email pipeline that processed 10,000+ emails across 4 concurrent workers, using Redis Streams consumer groups for parallel job execution
- Developed a Python classification and summarization service that sustained 200+ emails per minute at 1,500 ms p95 end-to-end latency
- Implemented automatic retries and fault-injection tests that recovered jobs from worker crashes, service failures, and timeouts across 5 tested failure modes

Contractor Marketplace | *Next.js, TypeScript, PostgreSQL, Prisma, Stripe* Mar 2026 – Present

- Built and deployed a full-stack marketplace serving 40+ users and 20+ contractors across job posting, bidding, hiring, messaging, payments, and reviews
- Enforced session, role, and resource-level authorization for customer and contractor workflows using NextAuth.js and server-side ownership checks
- Designed transactional hiring and payment workflows with PostgreSQL constraints, Prisma transactions, and idempotent Stripe webhook processing
